

MD DANISH

Cybersecurity Fresher · Open to SOC, Security Engineering & Analyst Roles

Bengaluru, India | +91 88253 24565 | dmd60484@gmail.com | linkedin.com/in/md-danish-8854542b1 | github.com/Danish-spidy

PROFESSIONAL SUMMARY

MCA graduate specialised in Information Security Management Systems (ISMS) from Jain University, with hands-on experience building production-grade security tooling. Designed and shipped an AI-powered network intrusion detection system, a Windows endpoint detection and response (EDR) tool, deception honeypots, an OSINT automation platform, and an autonomous GRC auditor. Strong in threat detection and response, MITRE ATT&CK mapping, secure coding, and Python automation. Seeking a SOC Analyst or Cybersecurity Engineer role focused on defense, detection, and security engineering.

TECHNICAL SKILLS

Security	Threat Detection & Response, SOC Operations, MITRE ATT&CK, Network IDS/IPS, Endpoint Detection & Response (EDR), Incident Response, OSINT, Deception & Honeypots, GRC & Compliance, Secure Coding, Vulnerability Assessment
Programming	Python, Java, JavaScript, Bash, SQL
Networking	TCP/IP, Packet Capture & Analysis, Linux, Windows Internals
Tools	Packet Sniffing, FastAPI, Flutter, Firebase, Git, GitHub, REST APIs, SQLite, Nikto, WhatWeb, SQLmap, Wireshark
Mobile	Android Studio, Android SDK, BLE / Bluetooth (Eddystone), RSSI Scanning

SECURITY PROJECTS

SENTRY — AI-Powered Network Intrusion Detection System

- Built a polyglot IDS (C sensor, Python detection engine, JavaScript dashboard, Android client) that detects 7 attack classes in real time and maps them to MITRE ATT&CK techniques.
- Engineered a live packet-sniffing sensor in C feeding a FastAPI brain; web dashboard renders live alerts and network topology.

MIRAX — AI Deception Honeypot Platform

- Engineered a deception system that traps intruders inside a fully AI-generated fake corporate environment while a second AI profiles the attacker and maps behaviour to MITRE ATT&CK.
- Implemented canary tokens and live attacker telemetry across a three-tier trap.

HEIMDALL + AEGIS — AI Digital Bodyguard (Windows EDR)

- Developed a system-level endpoint detection and response tool in Python with live threat detection and Active Defense (kill, quarantine, block, remove) plus a Guard Mode.
- Built the AEGIS module to protect the human layer: scam, manipulation, and deepfake detection.

ATLAS — AI CISO Orchestrator

- Built an LLM-driven security orchestration engine that autonomously runs multi-tool defensive missions across a target environment.

CODEX — Autonomous GRC Auditor

- Created an AI auditor that ingests evidence and produces compliance and audit findings, designed for real banking and GRC audit workflows.

SPIDY — OSINT Intelligence Bot

- Built a Python Telegram bot with 14 OSINT features: identity-graph mapping, EXIF and landmark geolocation, AI security analysis, and automated PDF intelligence reports using only free APIs.

CyberMentor Elite — AI Cybersecurity Learning Platform

- Developed a Flutter app teaching networking, ethical hacking, OWASP Top 10, and secure coding through a voice-enabled AI tutor.

Neural Lock — Android Anti-Theft Honeypot

- Built an app that disguises a stolen phone with a fake home screen, then covertly captures the thief's photo and location and alerts the owner.

EXPERIENCE

Cybersecurity Intern — Corizo (Remote)	Feb 2025 – Mar 2025
- Performed hands-on security testing in a lab environment: packet capture and traffic analysis with Wireshark, web server and technology fingerprinting with Nikto and WhatWeb, and manual SQL injection testing against vulnerable web applications. - Practiced reconnaissance, vulnerability identification, and web application security assessment workflows end to end.	
Android Application Developer (Intern) — Larsen & Toubro (L&T)	Jul 2024 – Oct 2024

- Built a suite of Android apps for client Sony, including an Eddystone Beacon scanner (RSSI-based proximity for advertising and location) and a Bluetooth BLE/Classic RSSI scanner for nearby-device detection.
- Implemented Android fundamentals across the suite: Services (bound, unbound, foreground), Intents, BroadcastReceivers, multi-Activity navigation, and state retention across configuration changes.

EDUCATION

MCA — Information Security Management Systems (ISMS) Jain University, Bengaluru	2023 – 2025 · 66%
BCA — Bachelor of Computer Applications Impact College, Patna	2019 – 2022 · 74%

CERTIFICATIONS

Security & Forensics	Digital Forensics Essentials — EC-Council (2024); Applied Cryptography — University of London (2024); Security Auditing — Jain University (2025)
Cloud Security	AWS Cloud Practitioner Essentials, AWS Technical Essentials, Migrating to AWS — Amazon (2024); Azure Compute, Storage & Database Security — Whizlabs (2024)
Systems Security	Windows Server Management & Security — University of Colorado Boulder (2025); Managing Windows Servers & Virtualization — SkillUp EdTech (2025); Secure Your Data at Rest — Microsoft (2024)
Emerging Tech	Blockchain System — University of California, Irvine (2024); 5G for Everyone — Qualcomm (2024)
Additional	ADCA — Advanced Diploma in Computer Applications (2018, 84%); KYP — Basic IT Skills Training (2017, 96.76%)
